SUMMARY & HIGHLIGHTS

A passionate **Electronic and Automation Engineer** with 3 years of experience in technical support, component analysis, and automation systems.

- Skilled in troubleshooting electrical systems and providing high-quality remote assistance.
- Strong communicator focused on customer satisfaction and continuous professional growth.
- Developed school projects, such as a color sorting conveyor belt, a robotic arm, and electronic circuits, as a digital clock.

TECHNICAL SKILLS

Embedded Systems: STM32, Arduino, Embedded C, C/C++, External Interrupts, Digital Electronics.

Hardware & Electronics: Electronic Components, Component Selection, Sensors, Actuators, Motor Control, Oscilloscope, Multimeter, Signal Generators, Power Supplies, Electrical Troubleshooting.

Automation & Controls: PLC Programming, Ladder Logic, Studio 5000, HMI, Alarm Logic, Industrial Communication Networks.

Electrical Systems: 3-Phase Power Systems, Electric Arc Furnace Systems, Industrial Instrumentation.

Engineering Tools: AutoCAD, Power BI, Microsoft Office.

PROFESSIONAL EXPERIENCE

Remote Support Engineer - AMI Automation

Nov 2024 - Jun 2026

- Accountable for provided remote technical support for Electric Arc Furnace (EAF) systems across 5 plants in the United States and Canada, maintaining 95% system yield and ensuring high customer satisfaction.
- Proactively performed root cause analysis to diagnosed and mitigated faults in 3-phase power systems and automation controllers, significantly reducing unplanned downtime by over 20 hours monthly through remote preventive monitoring.
- Created detailed performance reports and documentation using Power BI to drive quality improvement initiatives, support knowledge sharing, and optimize furnace operations.
- Integrated Kelman monitoring units and engineered 4 custom alarm logics, enabling real-time variable tracking that significantly improved furnace stability and prevented equipment overstress.

Electronic Components Intern - Schneider Electric

Feb 2023 – June 2024

- Supported product selection and configuration for electronic and electromechanical components.
- Communicated with manufacturers and distributors to ensure optimal component sourcing and application.
- Contributed to quality improvements, process enhancements, and database management using PDM tools.
- Collaborated with sales, CAD, and environmental teams to evaluate and select components that met technical, regulatory, and customer-specific requirements, ensuring optimal integration and performance.

EDUCATION

Bachelor's degree in Electronic and Automation Engineering
Universidad Autonoma de Nuevo Leon

2024

PROFESSIONAL DEVELOPMENT

Embedding Sensors and Motors Specialization, (University of Colorado Boulder)
Learn PLC and HMI from Scratch Specialization, (Packt)

In progress
In progress
